Place Keywords by Country/Territory – Pacific Ocean January 2009 (without the Great Barrier Reef)

This keyword list contains Pacific Ocean (excluding Great Barrier Reef) place names of coral reefs, islands, bays and other geographic features in a hierarchical structure. For example, the first name on the list – Acacia Plateau – is in New South Wales which is in Australia. The leading label – COUNTRY/TERRITORY– indicates that place names are preceded by their country or territory. The list is sorted alphabetically. The same names are available from “Place Keywords by Ocean – Pacific Ocean (without Great Barrier Reef)” but in a hierarchy of ocean, seas and region name. Each place name is followed by a unique identifier enclosed in parentheses. The identifier is made up of the latitude and longitude in whole degrees of the place location, followed by a four digit number. The number is used to uniquely identify multiple places that are located at the same latitude and longitude. For example, the first place name “Acacia Plateau” has a unique identifier of “28S152E0001”. From that we see that Acacia Plateau is located at 28 degrees south (S) and 152 degrees east (E). It is place number 0001 at that latitude and longitude.

This is a reformatted version of a list that was obtained from ReefBase.

COUNTRY/TERRITORY > Australia > New South Wales > Acacia Plateau (28S152E0001)
