

## CoRIS Place Keyword Thesaurus by Ocean - 10/8/2018

### Atlantic Ocean

---

This keyword list contains Atlantic Ocean place names of coral reefs, islands, bays and other geographic features in a hierarchical structure. For example, the first name on the list - Sabana Archipelago - is in the Caribbean Sea/North Atlantic Ocean. The leading label - OCEAN BASIN - indicates this list is organized according to ocean, sea, and geographic names rather than country place names. The list is sorted alphabetically. The same names are available from "Place Keywords by Country/Territory - Atlantic Ocean" but sorted by country and territory name. Each place name is followed by a unique identifier enclosed in parentheses. The identifier is made up of the latitude and longitude in whole degrees of the place location, followed by a four digit number. The number is used to uniquely identify multiple places that are located at the same latitude and longitude. For example, the first place name "Sabana Archipelago" has a unique identifier of "23N080W0001". From that we see that Sabana Archipelago is located at 23 degrees north (N) and 080 degrees west (W). Its place number 0001 at that latitude and longitude. Note: some long lines wrapped, placing the unique identifier on the following line. This is a reformatted version of a list that was obtained from ReefBase.
